

Hit trials contain licking, miss trials do not: any raw hit - miss difference is also a movement difference. Pooled task sessions: 1752, 1744, 1423 (11-05), 1520 (one animal); 1317 and RB23 1704 flagged.
Movement removed = face + whisking + ball ridge model. Grey: 100 s windows (10 s guard) before / after recorded 120 s grey screens; unflagged sessions RB24 1538, 1534, RB23 1642, RB22 1138;
g: dots = sessions (hollow = flagged 1604, 1306), black bar = bootstrap 95% CI over the unflagged sessions, p = exact sign-flip over sessions; there is no no-loom control block.
Marker shape = animal (circle RB24, square RB23, triangle RB22), filled = unflagged, hollow = flagged (not pooled).
